

Disha – CAREER COUNSELLING

Target Audience

9th to 12th standard students

Project Details

Disha enables students to make an informed choice of their careers. It identifies the inner strengths, abilities and areas of interest of students through counselling aided by software-driven psychometric tests. Career experts and counsellors suggest appropriate careers to students. It also provides detailed information about various career options available under each stream of education and the future growth prospects of each career.

In rural areas, students have less awareness about the present-day educational and vocational courses. The majority of them are not aware of various careers available in different streams of education and the future growth prospects.

In the urban areas, there tends to be a herd mentality towards some popular careers. Due to lack of adequate career guidance, the students choose careers not suitable to their areas of interest and skill-sets - this leads to a large number of educated youth found to be less interested in their study/work or are not adequately skilled.

Disha provides career guidance to students from class 9 to 12 of rural and urban schools of Valsad, Bhavnagar and Amreli districts through career talk and psychometric tests. Career talk and counselling is given by a career counsellor.

The project employs Personal Response System (PRS) based psychometric test, working with RFID (Radio Frequency) remotes. With one PRS set, multiple students are tested at a time, that too with a single workforce. Based on the combination of student's interests, personality and aptitude (clerical, mechanical, numerical, spatial, reasoning and verbal), suitable top three careers are suggested by the software.

We have also developed an offline software-based psychometric test to reduce hardware (PRS set) dependency in order to make it available for mass adoption, for larger societal benefit.

Our Projects

Through different educational projects, we are touching young lives to unleash the potential in them. We aim to implement a new learning method in rural areas schools and turn it into a role model school for students. We plan a career guidance program and try to instil values through skill education. We provide a vision to enhance goal setting for a successful career. Our main focus area of learning is learning based on activities. We aim to provide quality education for financially weaker backgrounds by offering intensive...
