

Prabodhan— IGNITING THE SPARK WITHIN

Target Audience

9th to 12th standard students

Project Details

“Prabodhan” is a combination of vision enhancement, sensitization and industrial exposure to help students explore beyond academics and transform as more complete individuals, as well as more successful individuals, in the global India of tomorrow.

In the race for acquiring excellent grades, leading to admissions in top colleges/universities and getting placed in top companies, the basic objective of education is normally lost. The above trend has shifted our students towards a typically narrow academic-focused learning.

It is observed that students study mainly to score good marks/grades in examinations and focus less on the basic concepts/ fundamentals/skill enhancement; as a result, when they are subjected to real-time test/application of the learning, they often falter as most of their knowledge is bookish/ rote learnt.

This project helps students to realize the role of quality education in one’s life; the importance of being goal-oriented during the five years of secondary and higher secondary is also highlighted.

As per the planned schedules, senior students (ranging from 100 to 200 students) from class 9th to 12th standard are called for the three-hour program.

The program highlights the future economic growth path of India. Present-day emerging careers pertaining to their respective stream are showcased. Industry perspective on the overall personality requirement of a good candidate and the typical shortfalls, which students can try and cover up.

The program also gives industrial exposure to the participating students by which they can envision a real world where they will be working in the near future.

Project Highlights

- Vision enhancement
- Goal setting
- Industrial Exposure

Duration

3 hours
